# SUSTAINABILITY IS AT THE CORE OF OUR BUSINESS

## RECYCLABILITY - SINGLE USE PRODUCTS

Our single use products are ideal where it is geographically difficult or not cost-effective to return to source. We ensure that the components used can be recycled or disposed of without affecting the environment. Paper and board can be bailed, collected and pulped for further use in the paper industry, whilst some insulation materials can be ground down for repurposing into new products.

## RENTAL PROGRAMS

We offer a number of bulk shipper products for rent, via our Credo on Demand and Credo on Reserve programmes which support the sustainability commitments made by the dynamic, ever changing global pharmaceutical and cold chain industries.

## REUSABLE PRODUCTS

We offer a wide range of reusable packaging systems, all of which can be used and reused repeatedly. At the end of life of the product, outer components can be recycled (corrugated paper and plastic) TIC panels can be drained of PCM coolant and ground up. The VIP insulation material can be stripped or their outer covering and used for fuel in commercial incinerators.

## RECYCLABILITY - MANUFACTURING PROCESSES

We also ensure that as much waste generated in our manufacturing process is also recycled. This can be either paper or board which is bailed, collected and pulped for further use in the paper industry, or plastics which are collected and sorted, for use in anything from road surfaces to park benches.
